

“We needed a strategy for dealing with a significant number of legacy applications that were critical to our operations as we transformed our back-end systems.”

Director of Education, City-wide School Board,
one of Canada's largest metropolitan areas

IT Value Assessment Consulting optimizes the Application Portfolio ahead of transformational implementation

Challenge

A large city-wide school board needed help assessing which applications could be eliminated due to new Student Information System (SIS) capabilities and identifying what actions would be required for integrating the SIS with the remaining core applications.

Solution

Fujitsu utilized its IT Value Assessment approach and right sized it to meet the school board's needs. Our consulting team identified the key desired value outcomes, assessed and then scored the applications to determine the optimal actions.

We then created a transition strategy and implementation roadmap to achieve value.

Outcomes Realized

- Mapped legacy application functionality with the SIS application for a clear understanding of gaps and developed an action plan to resolve those gaps
- Created recommendations for process optimization initiatives targeted at improved safety and communication across the IT department
- Minimized the implementation timeline by 20% due to the efficiency and effectiveness of the implementation action plan created.
