

Introducing Fujitsu Data Centers

Driving Customer DX with Sustainable Data Centers

Digital Transformation (DX) is an indispensable strategy for simultaneously solving societal challenges and achieving sustainable business growth.

Fujitsu's data center services combine years of experience, advanced operational knowledge, and technological capabilities to provide IT infrastructures that support customers' DX.

Our major data centers provide 100% renewable power for customer systems, contributing to the realization of carbon neutrality.

Our data centers are also foundations that continue to grow in response to new digital needs such as generative AI.

We will accelerate our customers' DX safely and sustainably and create new value together.

Key Features

Green

Our major data centers are powered by 100% renewable energy, contributing to carbon neutrality. Through various energy-saving measures, customers can utilize an IT infrastructure environment with minimal environmental impact.

Connectivity

We offer Digital enhanced EXchange (DEX), a secure, closed-network service that seamlessly connects to various cloud platforms and diverse services. This allows us to realize the optimal hybrid IT environment precisely aligned with your unique requirements.

Robustness

To guarantee the resilience of your systems, our facilities are strategically located to mitigate natural disaster risks like earthquakes, fires, and tsunamis, and are built with robust infrastructure designed to withstand any threats.

Security

Our data centers are equipped with multi-tiered security zones, configured according to varying levels of sensitivity. We implement comprehensive, multiple security protocols, including biometric access controls and metal detectors, to rigorously safeguard your systems from any illicit activities.

3 Key Track Records and Data Points of Fujitsu's Data Centers

30 Years*

of Experience
Since Our
Service
Launch

1,200 Users*

Integrated Management System Program*
First in Japan to Achieve
the Highest-Level **"Premium Stage"**

* Number of years from the date of service commencement at Tatebayashi Data Center

* As of July 2025

* Integrated Management System (ISO 9001, ISO/IEC 27001, and ISO/IEC 20000). We are the first company in Japan to obtain the "Premium Stage" certificate from JQA, Japan Quality Assurance Organization.

Our major data centers

TATEBAYASHI Data Center

Achieving 100% Renewable Energy with Reliable and Secure Locations
TATEBAYASHI Data Center Supports High-Load Servers

✔ [Our Facilities](#)

YOKOHAMA Data Center

Achieving 100% Renewable Energy with Reliable Facility
YOKOHAMA Data Center Offering Convenience and Security

✔ [Our Facilities](#)

AKASHI Data Center

Achieving 100% Renewable Energy with Reliable Facility
AKASHI Data Center
Top-tier Robustness and Disaster Resilience

✔ [Our Facilities](#)

OSAKA Data Center

Located in a secure area with excellent access to Osaka city, the Osaka Data Center is also equipped to host high-load servers.

✔ [Our Facilities](#)

Tohoku Data Center	A highly reliable data center, boasting disaster countermeasures such as superior seismic installation methods and high-quality operations	✔ Our Facilities
Yokohama Kohoku Data Center	A data center that ensures stable operation through comprehensive disaster and security measures, combined with high-quality operations	✔ Our Facilities
Chubu Data Center	A data center located in a prime urban area, driving thorough labor-saving and automation	✔ Our Facilities
Osaka Senri Data Center	A data center that provides high-quality services through thorough safety measures and a high level of operations	✔ Our Facilities
Shikoku Data Center	A data center where dedicated customer account SEs and operations SEs work as one to contribute to our customers' business	✔ Our Facilities
Kyushu Data Center	A highly reliable data center, boasting disaster countermeasures such as superior seismic installation methods and high-quality operations	✔ Our Facilities
