# FUJITSU

# Cloud Access Security Broker (CASB)

## Empowering your safe cloud adoption

**The cloud is transforming organisations. It's changing how work happens as everything is more intuitive, connected, open, and collaborative. This creates new challenges in protecting SaaS and IaaS that legacy security solutions cannot address.**

Fujitsu's Managed Cloud Access Security Broker (CASB) is a next-generation threat intelligence-based service, powered by our purpose-built Security Operations Centre (SOC) and the technology stack from Netskope. This **24x7x365** service will provide your business with enhanced security analysis and policy enforcement capability as cloud resources are accessed.

## Rapid protection from emerging cloud-based threats

Fujitsu leverages our partners' market leading technologies to provide a commercially effective, high-fidelity service that can be running within your organisation in a matter of hours. We integrate monitoring, security analysis, and proactive tuning into a singular service outcome underpinned by the MITRE ATT&CK framework.

### Gain security visibility

Fujitsu provides visibility across a customer's cloud app eco-system. Appropriate security policies are enforced across cloud apps by leveraging Cloud Confidence Index (CCI) based risk-ratings.

### Reinforce data security hygiene

Prevent users on corporate cloud services (Outlook in Microsoft 365, Box, etc.), who download sensitive data, from uploading that data to unmanaged or personal cloud apps.

### Demonstrates appropriate security risk management

Meet cyber insurance provider and underwriter expectations and reduce customer's effort and time to meet evolving cyber insurance policy conditions.

# Bundle offerings

Our CASB services are available in flexible bundles - Essentials, Advanced, and Optional, so you can choose the level of protection that fits your needs.

| | Essentials (API) | Advanced (API + Inline) | Optional (SWG) |
|---|:---:|:---:|:---:|
| Discover cloud apps in use | ✓ | ✓ | ✗ |
| Assess risk of the cloud applications | ✓ | ✓ | ✗ |
| Enforce access controls on cloud apps | ✓ | ✓ | ✗ |
| DLP for data at rest | ✓ | ✓ | ✗ |
| Tuning | ✗ | ✓ | ✗ |
| Integration with 3rd party tools | ✗ | ✓ | ✗ |
| DLP for data in motion | ✗ | ✓ | ✓ |
| Anti-malware | ✓ | ✓ | ✗ |
| User behaviour analytics | ✗ | ✓ | ✗ |
| Threat intelligence | ✗ | ✓ | ✗ |
| Next-gen secure web gateway | ✗ | ✗ | ✓ |
| CASB service reporting | ✓ | ✓ | ✗ |
| Regulatory compliance reporting | ✗ | ✓ | ✗ |
| SWG service reporting | ✗ | ✗ | ✓ |
| Solution maintenance | ✓ | ✓ | ✓ |

# Implementation services

**CASB:**
Fujitsu will design, build and deploy the CASB solution that integrates seamlessly into your existing security ecosystem for unified policy enforcement and operational efficiency.

**SASE:**
CASB will empower your organisation to embrace the cloud securely, setting the stage for a complete SASE framework that integrates threat protection, zero trust, and optimised connectivity. Additional capabilities that you can subscribe to are Secure Web Gateway (SWG), Zero Trust Network Access (ZTNA), Firewall aaS and SD-WAN.
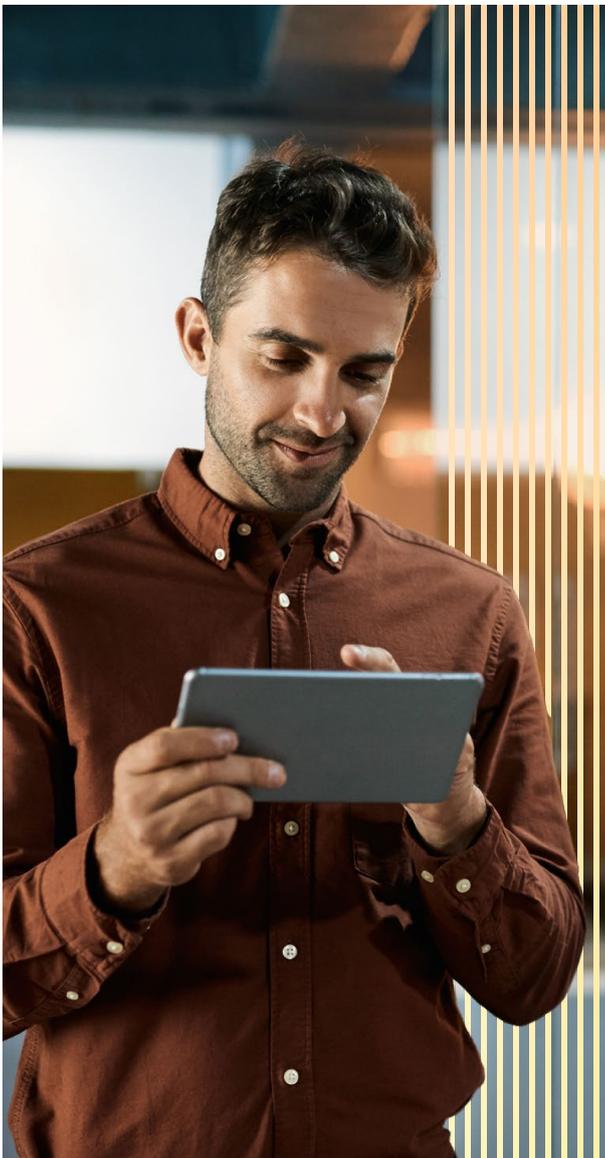

## Our approach

### Visibility
Understand cloud services in use across the company and quantify the associated risk.

### Data security
Govern usage of cloud apps across the company to protect sensitive data.

### Threat protection
We deliver robust protection against online threats through multiple layers of security built into the Netskope technology stack. This includes signature-based antivirus, a Web Intrusion Prevention System, and machine learning-driven threat detection to identify and block emerging risks in real time.

### Reporting
Provide business context-based assurance and compliance reporting.

### Solution maintenance
System management, optimisation, and support of the CASB Solution Components – including endpoints on/off boarding and integration support (3rd party tools).

Fujitsu leverages our partners' market leading technologies to provide a commercially effective, high-fidelity service that can be running within your organisation in a matter of hours.

**Improve efficiency of detection and response**

**Shift of focus from rule-based to contextual and behaviour correlation**

**Significantly fewer false positives and negatives**

## Ready to get started?

**Protect and manage your cloud with confidence**
