

# Protective Security Requirements (PSR) New Zealand Advisory

**From policy to practice:**  
Confidently meeting New Zealand's PSR requirements

**PSR implementation strengthens the protection of people, information, an asset across New Zealand.**

## What we do

Fujitsu's Protective Security Requirements (NZ) Advisory team helps organisations understand, assess, and uplift their security posture in line with New Zealand's PSR Framework.

We provide structured, expert-led assessments that evaluate your people, physical, and information security controls against PSR expectations, delivering clear insights into where you stand today vs what's required to strengthen your protective security environment.

Whether you are establishing your protective security baseline, responding to assurance expectations, or uplifting maturity across your organisation, we make the journey clear, achievable, and low impact.

### Clarity and confidence

Understand your current protective security maturity with structured, evidence-based insights.

### Risk informed decision making

Identify priority security gaps and risks, aligned to your organisational context and risk appetite.

### Actionable uplift roadmap

Receive a prioritised, practical roadmap to strengthen protective security controls over time.

### Assurance readiness

Demonstrate to stakeholders that your protective security approach meets New Zealand PSR expectations.

The PSR supports organisations to:

Understand their security risks.

Protect their people, information, and physical assets.

Build secure, resilient systems and processes.

We break down our advisory into clear, manageable steps that align with how your organisation operates across the 4 PSR domains:

Security Governance  
**(GOV)**

Personnel Security  
**(PERSEC)**

Information Security  
**(INFOSEC)**

Physical Security  
**(PHYSEC)**

Our approach includes:

- Targeted review of people, physical, and information security controls
- Mapping of existing practices against PSR requirements
- Identification of gaps, risks, and improvement opportunities
- Practical recommendations focused on achievable uplift, not theory.

Delivery is tailored to minimise disruption, fit your operational environment, and support sustainable improvement rather than one off compliance.

Fujitsu brings deep experience in security assurance, risk advisory, and government aligned security frameworks across the region. We work collaboratively with your teams to build capability and confidence, not dependency.

## The risks we uncover:

**Our advisory team identifies risks that are often hidden across complex organisations.**

By uncovering these risks early, organisations can take proactive steps to prevent incidents, disruption, and reputational harm.

**Gaps between documented security policies and real world practices.**

**Unclear ownership and accountability for protective security obligations.**

**Inconsistent protective security controls across people, physical, and information domains.**

**Security weaknesses that could impact service delivery, trust, or regulatory confidence.**

## Why choose us?

Expert led delivery by senior consultants with real-world protective security and assurance experience.

Our approach is informed by established security frameworks and assurance practices used across government and regulated.

Practical, not theoretical. We focus on outcomes you can implement. Not just reports on what's missing.
