Darknet Monitoring

Continuous dark web intelligence

We monitor the deepest corners of the internet to protect your organisation from unseen risks.

Darknet Monitoring is the continuous surveillance of hidden areas of the internet, such as dark web forums, marketplaces, and chat rooms - to detect mentions of your organisation. This includes identifying leaked employee credentials, stolen data, and discussions of planned attacks before they escalate into breaches.

Early threat detection

Identify risks before they impact your business.

Reduced attack surface

Discover and remediate exposed assets.

Enhanced incident response

Gain actionable intelligence for faster containment.

Continuous protection

Around-the-clock monitoring of darknet sources.

The risks it uncovers

Credential leaks:

Exposure of employee usernames and passwords on underground platforms.

Data breaches:

Sensitive corporate information being traded or sold.

Shadow IT discovery:

Forgotten or misconfigured publicly exposed assets vulnerable to exploitation.

Attack planning:

Early signs of ransomware or phishing campaigns targeting your organisation.

Cyber criminals operate in the shadows.
Our Darknet Monitoring service brings those threats into the light.

Our approach

We think like attackers and act like defenders. Our team proactively monitors and investigates darknet activity, leveraging OSINT techniques and advanced threat intelligence. We don't wait for alerts, we hunt for threats continuously, ensuring your organisation stays ahead of adversaries.

- -

- **Human intelligence + automation:** Combining expert analysts with advanced monitoring tools ensures accuracy and speed.
- **Contextual risk analysis:** We prioritise findings based on relevance to your organisation, so you get actionable insights rather than noise.
- **Integration with incident response:** Findings can be fed directly into your security operations for rapid remediation.
- **Continuous improvement:** Our monitoring adapts to emerging threats and new darknet platforms, keeping you ahead of attackers.

Darknet report: On-demand risk assessment

Our Darknet Report provides a comprehensive, point-in-time assessment of your organisation's presence on the dark web. This service is designed for businesses that need immediate clarity on potential risks, such as breached credentials, leaked sensitive data, or mentions of your brand in underground forums, without committing to continuous monitoring.

Trusted partner

We go beyond compliance checkboxes to deliver real security outcomes.

Compliance support

Meet regulatory requirements for proactive monitoring.

Proven success

Real-world cases where our monitoring prevented catastrophic breaches.
