

Strategic advantage delivered

Fujitsu Force: enabling Defence to achieve its mission through the delivery of secure, integrated digital services.

Skills. Passion. Heritage.

For more than four decades Fujitsu has innovated with the ADF to deliver mission-focused information, co-creating new technologies and capabilities to ensure Defence is prepared and ready to defend, fight, and win in a digital age.

FUJITSU: PROUD PARTNERS TO DEFENCE

In the decades we have served the ADF, our reputation has stood for transparent dependability. Now we are increasingly known for our innovative problem solving and our ability to understand the strategic circumstances our nation faces.

With our portfolio of highly secure digital integration solutions, we enable Defence to extend its capability and functionality across all five domains: land, maritime, air, space, cyber and information, offering increased agility on deployed operations.

Digital capability is the foundation of modern Defence. Technology has a significant impact on the character of warfare and deterrence, and is shaping the changing balance of power, delivering an asymmetric advantage for technology-driven defence forces. We work with Defence to clearly define problem statements to meet current and future capability priorities.

We're immensely proud of our long working history in close partnership with Defence and national security organisations in Australia and around the world.

OUR SKILLS

As a large, dedicated defence-ready team across every state and territory in Australia, we apply our unique skillset to support Defence's modes of operation and decision-making processes. Our long-standing affiliation with the ADF means we have intimate knowledge and insights into the complexities of modern war fighting, and the skills, technologies and partnerships Defence requires to achieve its end-to-end capability goals.

WE SERVE THOSE WHO SERVE WITH PASSION

Our Fujitsu Force is made up of passionate industry professionals, with many of us former serving members, or with close family connections. Our team's work ethic aims to mirror our defence colleagues; values aligned, acting with purpose and focused on enabling the war fighter, right to the edge. Drawing on our long partnership with the ADF, we deliver projects with full transparency and governance, particularly where urgent solutions are needed.

OUR HERITAGE IS DEFENCE

Proudly Japanese, our expertise in working with both Australian and New Zealand Defence Forces means we bring insights and experience based on our active support of like-minded nations that are party to agreements including FVEYs, QUAD, AUKUS, ASEAN, ANZUS, and bi-lateral agreements with Australia and Japan.

Fujitsu's Global Defence Office (GDO) coordinates Fujitsu businesses across the globe to share relevant experience and technology while maintaining strict security classifications. By co-creating and collaborating with Defence to solve problems, we shorten development cycles through global lessons and insights.

Fujitsu: Delivering ICT Solutions for Defence Mission Success

To support Defence with enhanced decision making and deliver strategic capability, Fujitsu is focused on key technology areas including **Computing and Network, Converging and Emerging Technology and Digital Services.**

Empowering the Australian Defence Force with Cutting-Edge ICT Capabilities

The Deployed ICT ecosystem is a comprehensive network of organisations, units and individuals working collaboratively and cohesively across the Maritime, Land, Air domains to deliver and sustain ICT capabilities in support of ADF and coalition global operations. D-ICT enables decision superiority to the Warfighter. In parallel Fujitsu delivers cross functional and architectural outcomes across DICT environments to ensure the ADF remains prepared to conduct operations in a dynamic and uncertain regional and global security environment.

Comprehensive National Deskside Support

Through our National Deskside Support engagement, Fujitsu enables access to and supports ICT Services across all Defence locations in Australia and key overseas posts. The National Deskside Support services are an integral component of the End User Support Services Defence provides to its Warfighter and business stakeholders, and other Users across the ICT Environment. Mission-critical ICT services support 101 Defence bases, managing 560,000+ assets and handling 120,000 service tickets annually.

Digital Systems Integration for Mission Readiness

Digital Systems Integration involves embedding digital technologies across every aspect of a business, transforming operations and the way value is delivered. Connecting mission systems with support systems demands both technical proficiency and a deep understanding of Defence requirements. Fujitsu simplifies this integration by combining its extensive Defence expertise with advanced technical capabilities to enhance overall capability effectiveness.

Partnering for Defence Excellence

Fujitsu is committed to sovereign environment investments in the Australian and Oceania region, focusing on local data sovereignty, security, and regional digital experience growth.

Digital Services

With local talent and global defence expertise, Fujitsu enables and drives digital and sustainability transformation at speed. We support Defence with services spanning Consulting, Cyber, Data and AI, Cloud & Modern Workplace and Zero Trust assessments.

Fujitsu Data & AI Consulting - fit for purpose data & AI solutions Cloud and Modern Work Solutions:

- Migration of on-premise infrastructure to hyperscale cloud providers
- Traditional and Future-Ready system design and deployment
- Developing secure, scalable cloud environments suitable for both PROTECTED classifications
- State-of-the-art and out-of-box offerings are integrated with modern workplace productivity tools and tailored to meet the highest standards of the Australian Defence Industry. With top-tier security, enhanced collaboration, seamless app integration, and peak performance, our solutions are designed to propel Australian Defence and its partners' operations forward with confidence

Cybersecurity:

- Implementation of Zero Trust Architecture frameworks, enhancing security postures across defence environments
- Pioneering secure capabilities such as Tenable Identify. Exposure deployments and advanced security operations
- Secure migrations and managing sensitive data in compliance with the Essential Eight
- Enabling the accreditation of systems through the design, documentation and proactive engagement across the Defence Digital Group

Deployed solutions and professional services

- Extensive experience in delivering and maintaining critical operational systems for deployed environments
- Innovative cloud solutions tailored for deployed contexts, ensuring seamless integration and functionality even in remote and challenging locations
- Providing organisation steering in the enhancement and modernisation of their architectural capabilities and processes

Optimised ITSM and Asset Management:

- Streamline IT asset management with centralised control and real-time visibility, enhancing efficiency and compliance.

Modernisation through Digitisation:

- Automate and modernise workflows by transitioning from outdated systems to advanced, scalable digital solutions.

Unified Employee Experience:

- Create a single platform for all employee interactions, ensuring a consistent and streamlined experience across the organisation.
