FUJITSU

Email Protection Services (EPS)

Fortify your email security

The next generation, multi-layered adaptive approach to protect against email threats.

At Fujitsu, we understand that protecting business emails from known and unknown threats is crucial to any organisation's reputation and cyber security strategy.

Email: The #1 cyber threat vector can be costly to a business due to …

Phishing and ransomware:

- Fraudulent emails pretending to be from known or trusted business representatives
- Malicious mails with a sense of urgency
- Emails from compromised internal email accounts
- Malware attached to email
- Malware accessed via clicking a link embedded in email

Fujitsu's EPS is a next-generation, multi-layered email defence service driven by curated threat intelligence and industry-leading machine learning algorithms. Powered by Proofpoint, our EPS easily integrates with your current email solution to detect and block malicious emails, remediate incidents, and investigate overall risk, and we can deliver implementation of the tech stack as well as managed services to support it.

Detection
Proactive detection and isolation of malicious emails reduce the entry point threat exposure to the business.

Visibility
Detailed insights, expert analysis and reporting into suspicious activity, such as login attempts from suspicious locations or unusual circumstances.
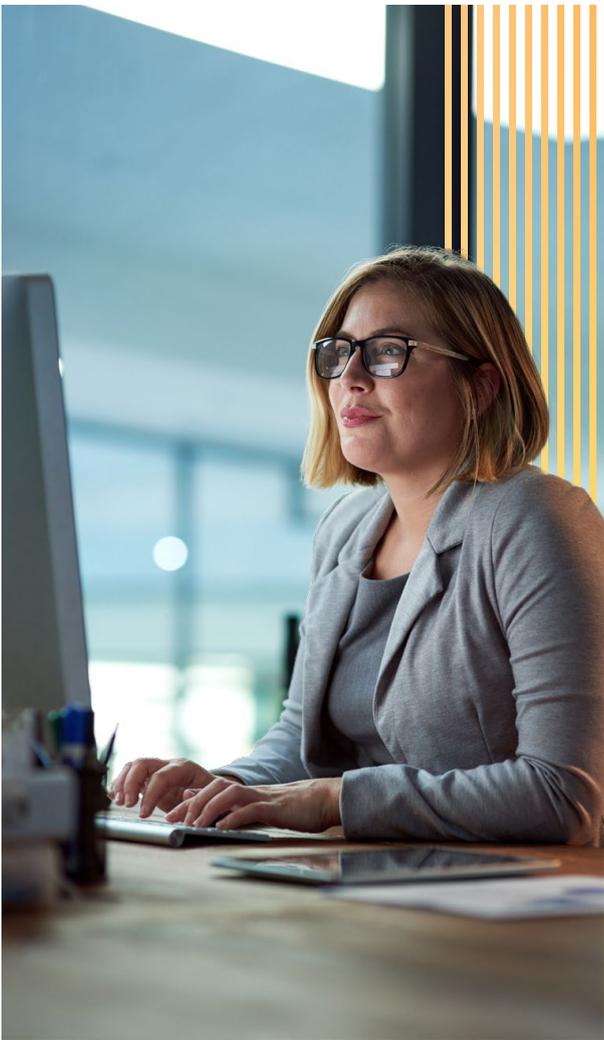

Time
Reduce the time it takes to investigate and remediate security incidents.

Awareness
Significantly improve user awareness via targeted, threat-guided education which prepares employees to resist social engineering attacks.

Our approach

Protect and detect
Secure and control inbound and outbound email. Protection against imposter and phishing with detailed visibility gained through near real-time reporting and established security awareness baseline.

Respond
Initiate remediation workflows, provide visibility and oversight through automated response actions, security incident response and coordination.

Situational awareness
Provide visibility and business context in relation to the threat landscape, customer knowledge management, communications, and reporting.

Solution maintenance
System management and support of the email protection components including email domain on/off boarding and integration support (data enrichment feeds, workflows, and automated response integrations).

Our EPS secures your email gateway in real time using best-of-breed artificial intelligence and adaptive machine learning systems that quickly identify and isolate sophisticated malicious attacks.

Protect your email system using Natural Language Processing (NLP) to detect advanced threats beyond keywords.

Malicious email is removed and the malicious detection database updates with newly detected threats in real-time.

Our Information Security Manager (ISM) service provides advisory and business contextual reporting.

Stop the threat at the front door
