Executive Cyber Crisis Simulation

Building confidence to respond when it matters

Practical executive-level cyber crisis simulations that help organisations test decision-making, validate response arrangements, and strengthen resilience before a real incident occurs.

What we do

We design and facilitate executive-level tabletop cyber crisis simulations that replicate real-world cyber incidents relevant to your organisation's threat landscape and operating environment.

Working with executive leaders, boards and key ICT stakeholder, we simulate a live cyber event and guide participants through response and recovery decision-making, including coordination with internal technology teams.

The risks we help uncover

- Unclear roles, responsibilities and decision authority during a cyber incident.
- Gaps between executive decision-making and operational response.
- Ineffective escalation, communication or coordination under pressure.
- Assumptions about controls, processes or preparedness that have not been tested.

Improved executive readiness
Greater confidence in executive and board decision-making during a cyber crisis.

Validated response
Practical testing of response and recovery processes, escalation paths and integration points.

Better coordination
Improved alignment between executives, boards and ICT teams during incident response.

Actionable insights
Clear identification of lessons learned and priority uplift opportunities.

Our simulations are grounded in real-world cyber operations experience and are designed to be challenging, practical and constructive.

Our approach provides a safe, structured environment for executives and boards to practise responding to a realistic cyber incident, helping organisations identify gaps, validate assumptions and improve readiness without the impact of a live event.

Tailored scenarios

Custom cyber scenarios based on current threats and your organisational context.

Executive focused facilitation

Simulations designed for boards and executives, not technical teams alone.

Safe environment

Practice responding to a cyber crisis without the consequences of a real incident.

Outcome driven delivery

Focused on learning, improvement and resilience.

Preparing for a real cyber crisis

Cyber incidents place immediate pressure on executive teams and boards to make high-stakes decisions with incomplete information.

While technical response capabilities are critical, the ability for executives to coordinate, communicate and govern effectively during a cyber crisis is equally essential.

Each engagement includes:

Pre-engagement planning, including terms of reference and scope definition.

Facilitated executive or board-level cyber crisis simulation.

An outcome report capturing:

- Operational lessons learned
- Strategic and governance insights
- Organisational uplift recommendations.

Tailored to reflect your organisation's:

- Risk profile and threat environment
- Governance and escalation arrangements
- Executive and board responsibilities.

Why choose us?

Deep cyber security operational experience, with over 50 years of collective expertise across senior practitioners.

Strong understanding of executive board and governance expectations during cyber incidents.

Proven experience facilitating executive and board-level cyber crisis simulations.

Contact us today to discuss how we can help your organisation strengthen preparedness, decision-making and cyber resilience.
