

# Incident Response Readiness Review

Proactively safeguard your business with expert-led incident response preparation

**Being prepared for an incident is essential for protecting your reputation, operations, and customer trust.**

Fujitsu Cyber's Incident Response Readiness Review is designed to assess and uplift your organisation's ability to respond to cyber incidents. We review your current processes, documentation, and technical environment, ensuring your response plans are robust, actionable, and fit for purpose. Our team works closely with your key stakeholders to understand how your incident response processes operate in practice, and we provide tailored recommendations to strengthen your readiness.

## Why an external review matters

Even if you have an incident response plan in place, an independent review brings fresh perspective and uncovers gaps that internal teams might overlook. Our experts benchmark your readiness against industry standards and best practices, ensuring your plans are robust and actionable. We fine-tune your security tools and clarify team roles, so everyone knows exactly what to do when it matters most.

### Enhanced documentation

Clear, actionable incident response plans tailored to your organisation.

### Improved processes

Streamlined and effective incident response workflows.

### Technical readiness

Clear recommendations or optimising tools and configurations for rapid evidence collection.

### Actionable recommendations

Practical steps to uplift your overall incident response capability.

## Our approach

### Understand your environment

We start by getting to know your organisation, reviewing your existing plans, technology, and speaking with your key personnel to understand how you currently respond to incidents.

### Analyse

Next, we analyse your processes and technical environment, identifying strengths and areas for improvement.

### Actionable report

Finally, we deliver a clear, actionable report with tailored recommendations, and support you in prioritising and implementing changes.

Throughout, our focus is on practical advice, transparency, and empowering your team to respond confidently to any cyber incident.

**If you don't yet have a response plan**, we can design and tailor one from the ground up, giving you confidence and clarity for any scenario. With our support, you'll be equipped to collect vital evidence and respond swiftly to incidents.

#### Proven under pressure

We've supported organisations through real incidents and turned those lessons into practical readiness improvements.

#### How often should you conduct a review?

At least annually, after major incidents, or any significant environment changes.

#### Crisis simulations

We can also offer tabletop exercises for your team to gain hands on experience of a cyber attack.
