

See more, stop more with MXDR

With MXDR, you will gain faster threat detection and response, powered by unified visibility and automated remediation across endpoints, networks, and cloud.

Fujitsu's Managed eXtended Detection and Response (MXDR) service delivers comprehensive cyber security by integrating threat detection, investigation, and response across endpoints, identities, cloud applications, and networks. It combines advanced threat intelligence, unified security operations, and automated response capabilities to provide continuous protection and rapid incident resolution.

Increased visibility

Unified view of all security alerts across your network, endpoints, and cloud, on one platform.

Threat management

Embed threat hunting and UEBA to proactively detect emerging threats and assess anomalies for continuous protection.

Faster detection

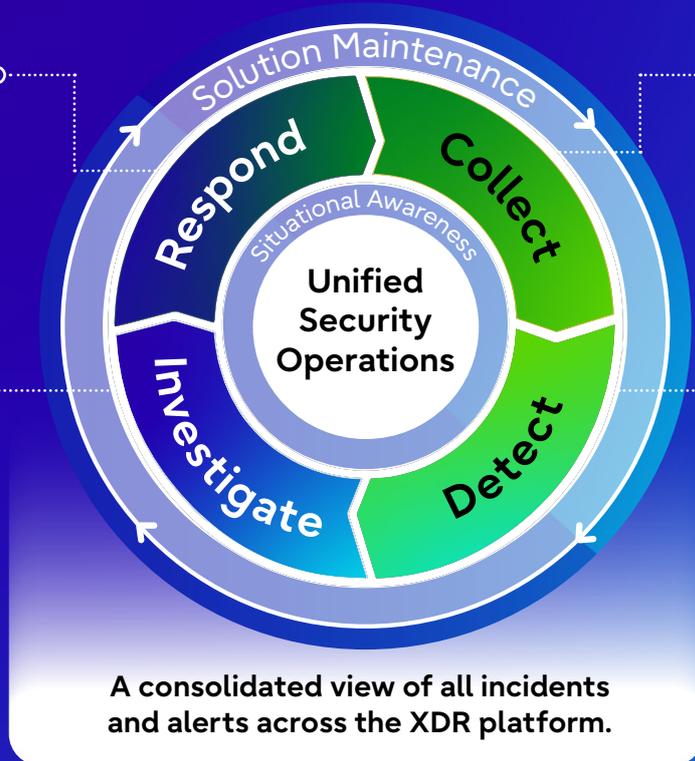

Fujitsu's cyber experts monitor 24/7, alerting you to critical issues before they escalate.

Enhanced response

Automated response and containment minimise impact and restore operations quickly.

Secure your organisation with unified, automated protection

Improved Incident Response for Computer Security Incident Response Team (CSIRT) and ability to Automate Investigation and Response (AIR).

Collection of all security telemetry into a single platform.

Single interface for enrichment and context enabling deep analysis for incidents and proactive threat hunting.

Dynamic environment for detection engineering with precision and actionable alerts.

A consolidated view of all incidents and alerts across the XDR platform.

Detect

- Monitor security controls and events
- Triage and prioritise threats
- Maintain use cases and playbooks
- Hunt threats proactively
- Apply curated threat intelligence
- Correlate internal and external data
- Support detection with enrichment pipelines

Respond

- Trigger containment and automated response
- Enable remote endpoint investigation
- Retrieve forensic artefacts remotely
- Analyse root cause and attacker behaviour
- Oversee full incident response lifecycle

Situational awareness

- Deliver threat visibility with business context
- Maintain tailored customer threat insights
- Provide regular reporting and updates
- Integrate strategic and operational threat intelligence
- Include forensic summaries and incident trends

Solution maintenance

- Manage and optimise XDR components
- Support endpoint onboarding/offboarding
- Integrate enrichment feeds and response workflows
- Validate logging and retention policies
- Ensure forensic readiness across systems

Fujitsu Cyber includes a specialised team of data security and forensics experts based in Australia and New Zealand, supporting local CISOs with tailored threat intelligence and incident response.
