

# Network Detection and Response

(NDR)

**Deep network insight powered by behavioural analytics gives you the clarity to detect early-stage attacker activity and respond with confidence.**

Our Network Detection and Response service provides visibility into east-west and north-south traffic, detecting behaviours that traditional controls miss. Leveraging advanced analytics, machine learning, and correlated telemetry, we identify lateral movement early, informed by real-world incidents seen across critical sectors.

**Continuously analyses network traffic in real-time to spot unusual patterns the moment they appear.**

## Outcomes

**Early identification** of stealthy or concealed attacker activity.

**Reduced** attacker dwell time.

**Enhanced** response capability and precision.

**Improved** overall network security posture.

## How we protect you

**Real-time** traffic monitoring.

**Machine-learning** and behaviour analytics.

**Threat hunting** across internal network flows.

**Integration with SIEM and EDR** for correlated response.

**Discovery of** suspicious devices through network-based telemetry.

**Analysis of traffic** patterns to detect anomalies without decryption.

## Why choose us?

**Enhanced visibility** across hybrid and internal networks.

**Detection of stealthy adversaries** and advanced lateral movement.

**Analyst-validated** findings for decisive response.

**Stronger** defence-in-depth architecture.

**Ready to strengthen your cyber resilience? contact us today.**
