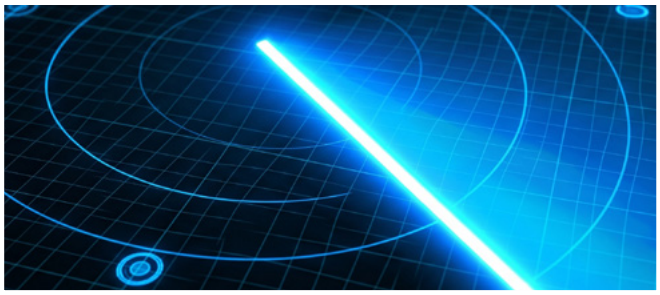
FUJITSU

Threat Intel Profile Assessment

Intelligence-driven defence

A targeted assessment that reveals which threat actors are most likely to target your organisation — and how to defend against them.

Understanding who is most likely to target your organisation and how they operate is essential for building resilient defences. Fujitsu's Threat Intel Profile Assessment delivers a deep, intelligence-led analysis of your threat landscape, identifying the APT groups and adversaries with the highest likelihood of targeting your industry, geography, and technology environment.



Turn threat intelligence into actionable defence

By mapping attacker tactics, techniques, and procedures (TTPs) and aligning them to your weaknesses, we provide clear, tailored recommendations to strengthen your security posture, focus remediation efforts, and enhance preparedness against the threats most likely to target your organisation.

- Clarity on your true threat landscape
- Understanding of adversary TTPs
- Prioritised risk profile
- Strengthened defensive readiness

Prioritise your cyber security efforts based on credible threat intelligence

We map real-world adversary activity to your environment, helping you understand which threats warrant the greatest attention.

Threat actor attribution and profiling

Identify specific APT groups with a high likelihood of targeting your organisation, supported by intelligence on their motivations and methods.

TTP mapping against your environment

Align adversary TTPs to your systems, processes, and business model to highlight concrete attack paths.

Industry and sector specific targeting analysis

Evaluate how your sector is being targeted globally and regionally, using curated intelligence from our ACIRT team.

Risk prioritisation and mitigation roadmap

Provide a structured list of priority risks and a remediation roadmap tailored to your technical and business context.

Strategic recommendations for defence enhancement

Include governance, process, and technology improvements aligned with adversary capabilities.

Critical asset and exposure analysis

Identify the assets and business functions most attractive to potential adversaries and assess their exposure to risk.

Why work with us?

Targeted intelligence - no generic threat lists, only adversaries with a demonstrable likelihood of targeting your organisation.

Delivered by Fujitsu's Advanced Cyber Intelligence & Response Team (ACIRT), combining global threat insights with regional context.

Every assessment is aligned to your industry, geography, technology stack, and business context, ensuring relevant and actionable outcomes.
